

XBEAM. Other Applications

Typically the lightweight aluminium Xbeam is used in the portal-mount plant platform, but there are limitless options when it comes to a structural beam that is only 35% of the weight of a standard structural steel beam.

- Bridges/gantry's
- Long span external access and mounting systems
- Internal raised access systems where minimal support points are available.
- Mezzanine floor support structure
- Stair systems
- Earthquake strengthening in buildings
- Any structure where weight is an issue
